WEB-PORTAL WEB SITE

Student   Name: **Sairambay Eldar**

Group name: **IT-1911**

Tutor name: **Seitenov A.**

Date: **23 March**

Nur-Sultan 2020

Purpose:

My goal is to create a website for the Web-Portal store that sells computers, laptops, ultrabooks and digitalize this store.

Tasks:
The first task is to make the site wireframe in HTML.
The second task is to give the design using CSS.
The fourth task is to make the site adaptive to tablets, laptops and smartphones.
Write functions that will work through the Javascript language.

Briefly about the store

Web-Portal is a store that sells computers, laptops and computer spare parts; this store is located in the village of Aksukent. From the first I looked at similar sites like White Wind, Kaspi store and looked for an idea how the site should look. I found what should be in the landing page. It wasn't difficult for me because I worked as a designer for about a year and was very good at Corel drow. I knew that more than 3 colors should not be used. And I came to the conclusion that my site should be mostly black and white. Then he began to make an HTML wireframe, after which he began to give design with CSS. After that, when I did this site at night, my eyes started to hurt and I got the idea to make a night mode. After that I added Russian and English. I did all this through Javascript.

Total:

1. 14 html pages
2. 1 Javascript File 9 functions, 412 lines
3. 1 CSS File (749 lines)
